Ex.No.-1.1-Design and Draft the given 2D Sketches in modelling software.

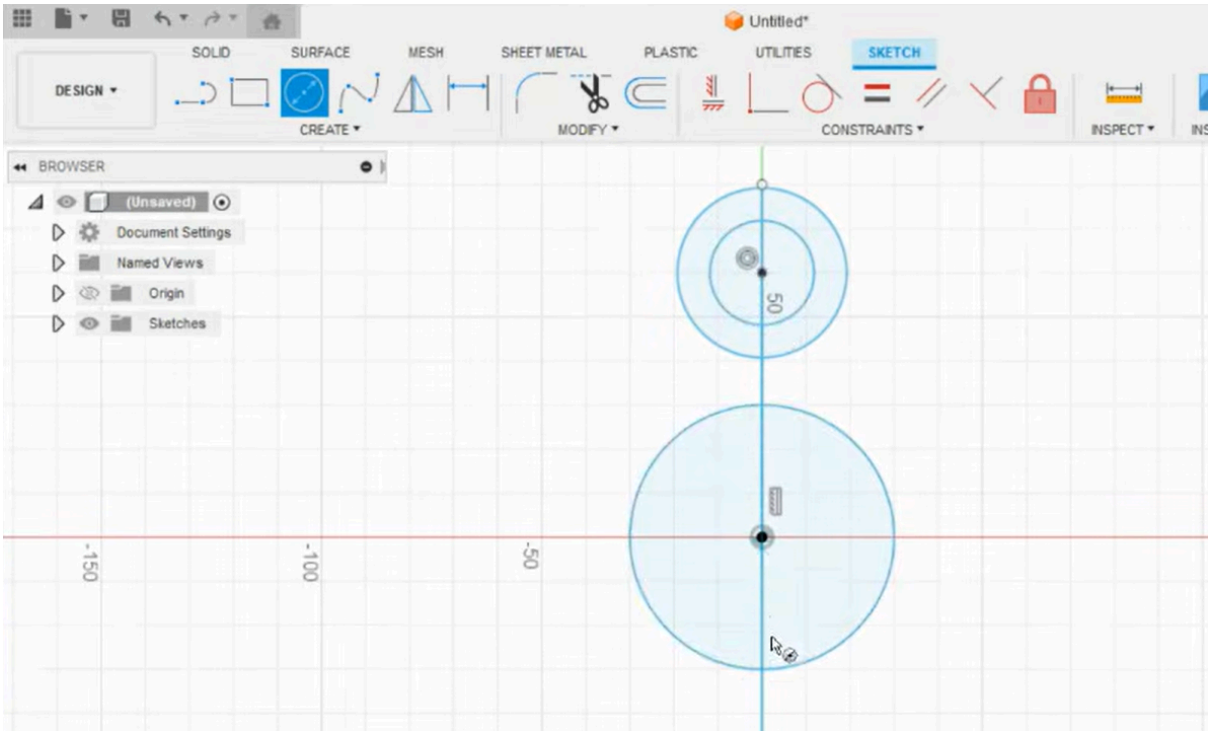

AIM: To sketch the given drawing with dimensions using fusion 360 tool.

REQUIREMENTS:

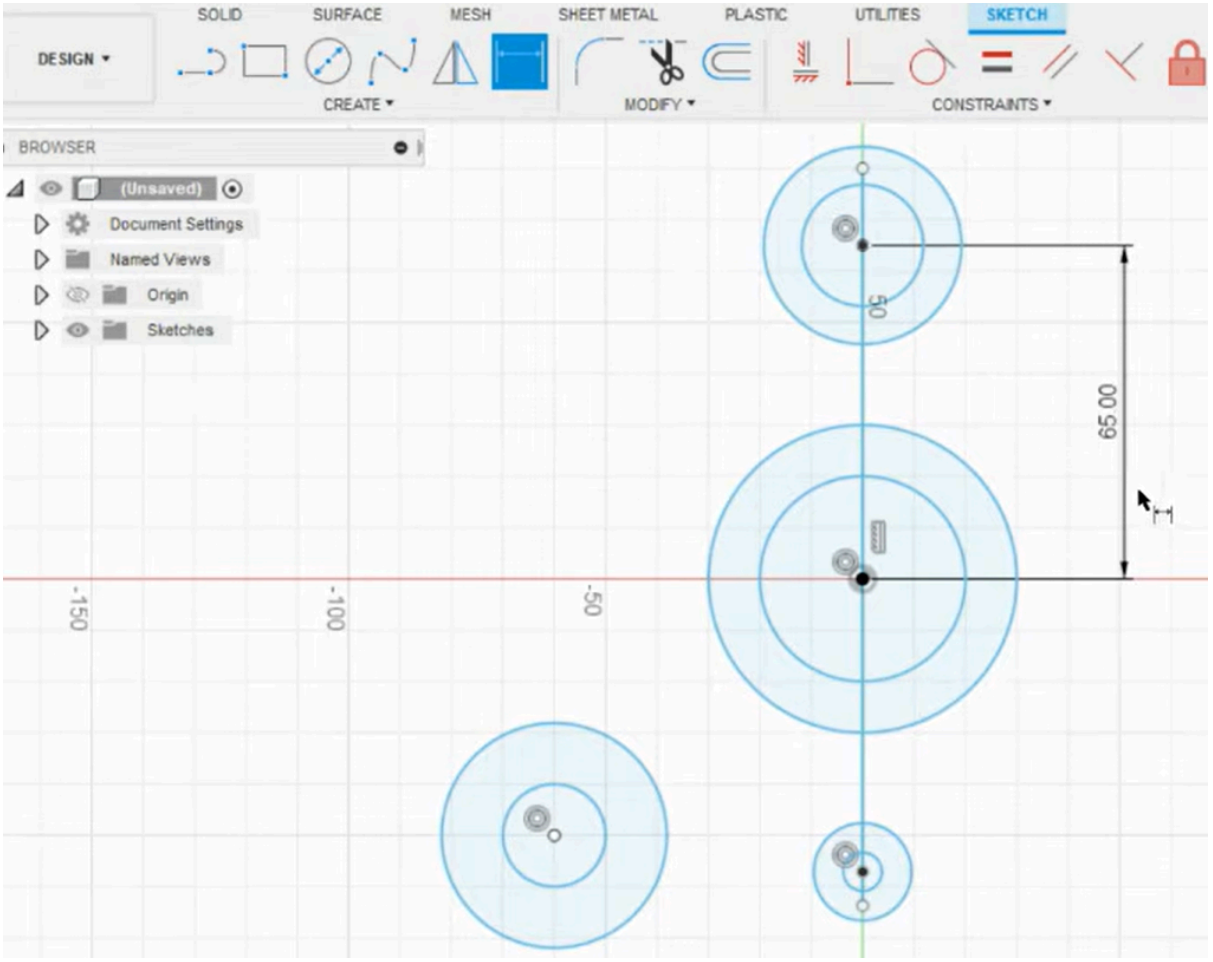

1.Autodesk fusion 360
2.Windows 11
3.16 GB of RAM (integrated graphics recommend 2 GB or more)
4.2.5 Mbps or faster download; 500 Kbps or faster upload

PROCEDURE:

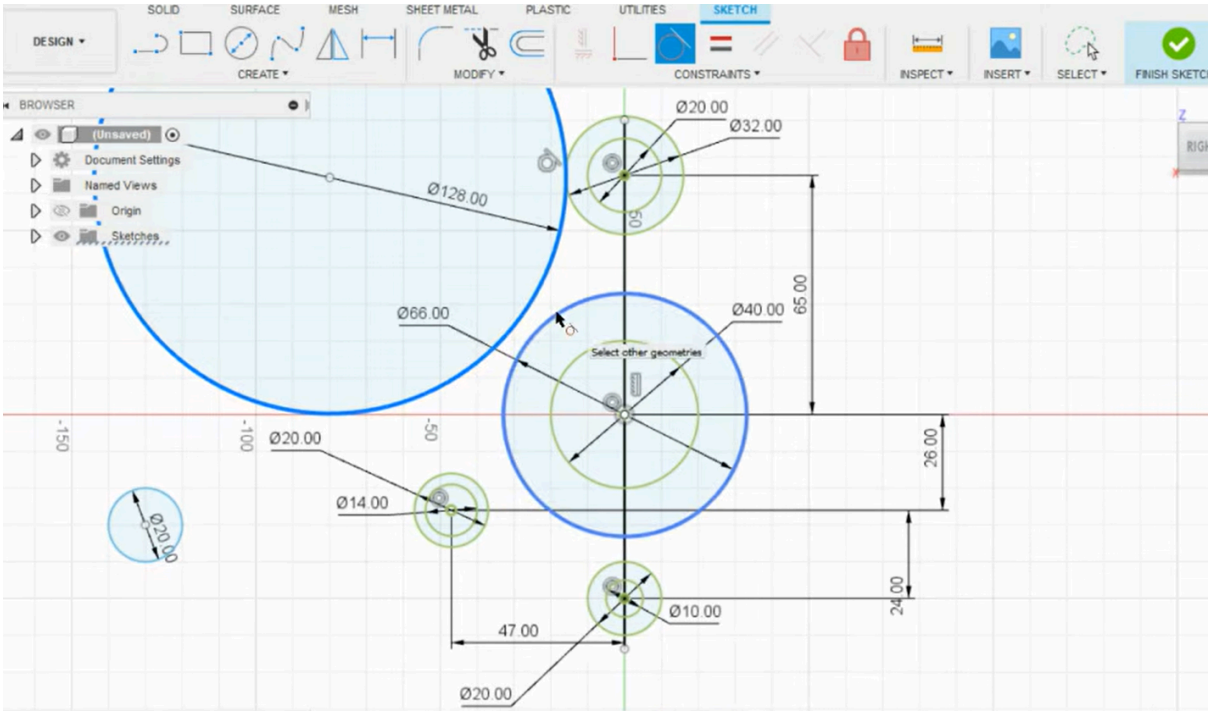

1.First we should open the fusion 360,then select new to create a new project.
2.We should select the view as front or top or which view we want.
3.Then click create sketch to start our project.
4. Central Star / Multi-lobe Profile: Inner lobes have a radius of R6.
5. Outer Diameter Arc: Diametral reference of Ø40 and Ø66 around the central body.

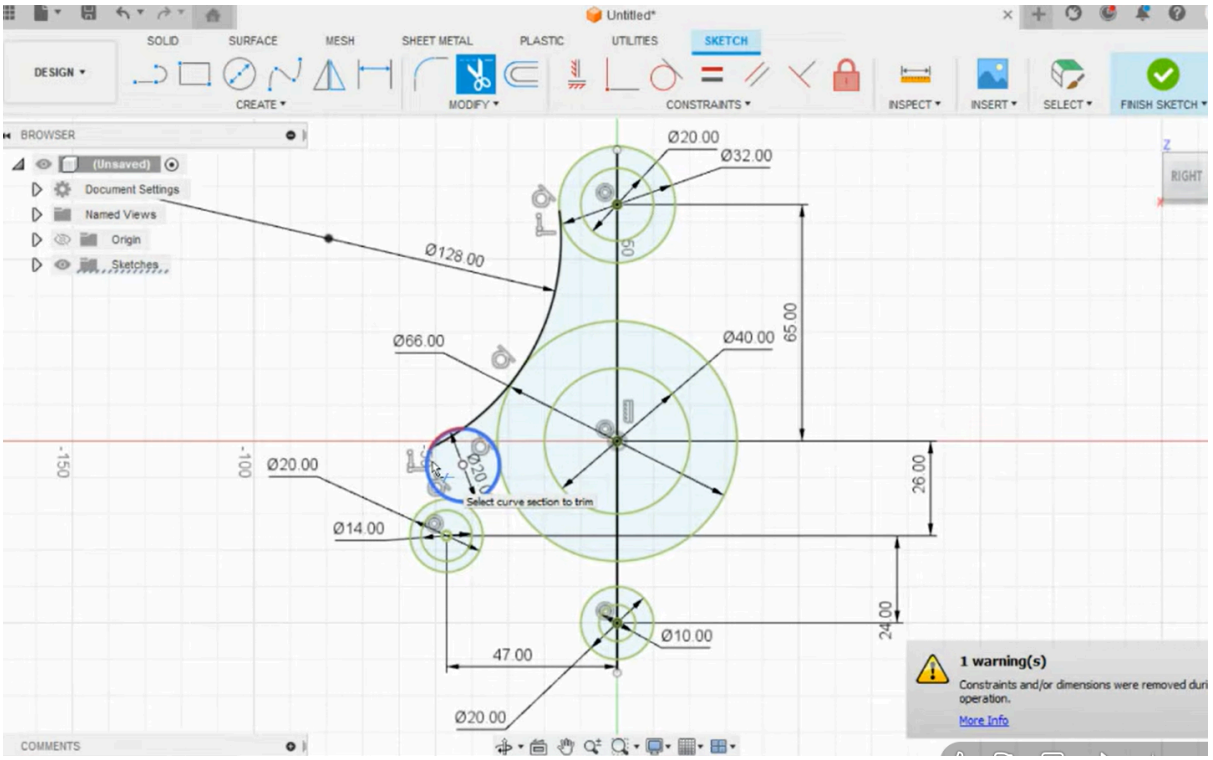

6.Center-to-Center Distance (Horizontal): 47 mm on both the left side and right side from the central vertical axis (total span = 94 mm).
7. 26 mm upward vertical distance to the upper reference.
8.24 mm downward vertical distance to the lower feature.
9. By using this we can align the lines and curves as what we want so we are using this here.

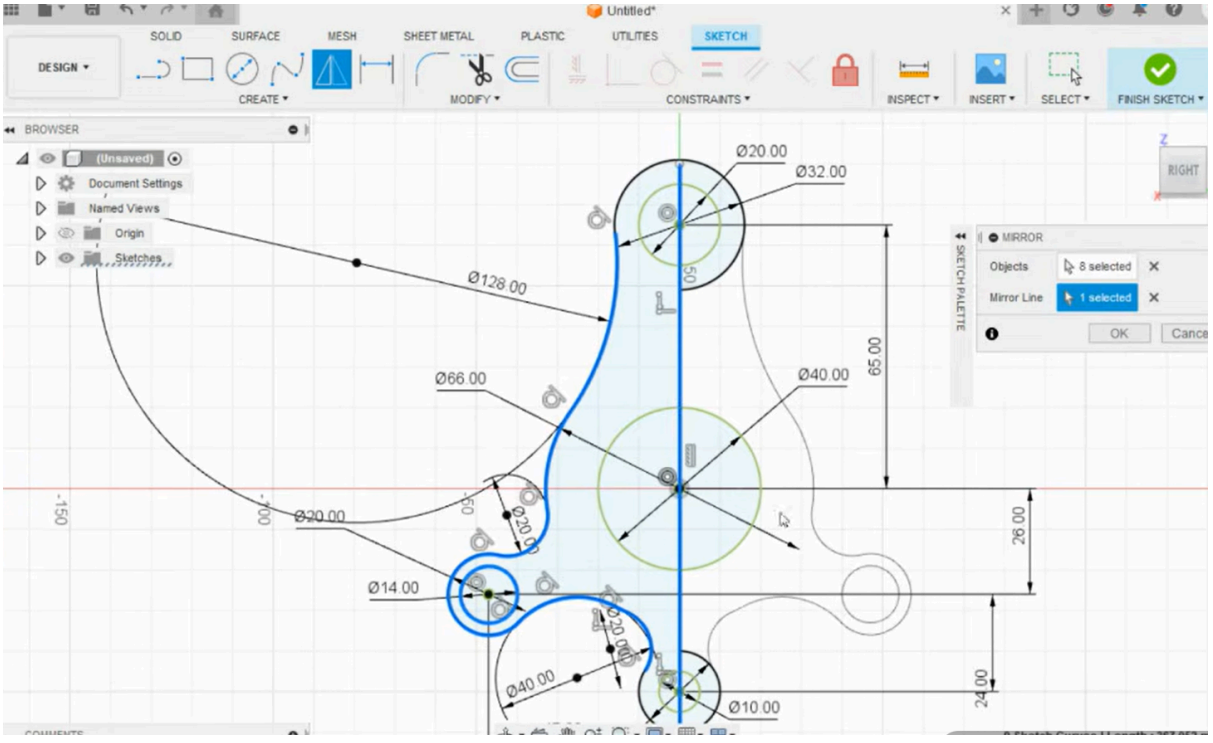

10. By using Tangent option we can easily connect a circle to a line which we called tangent so this plays a major role here do do such things.

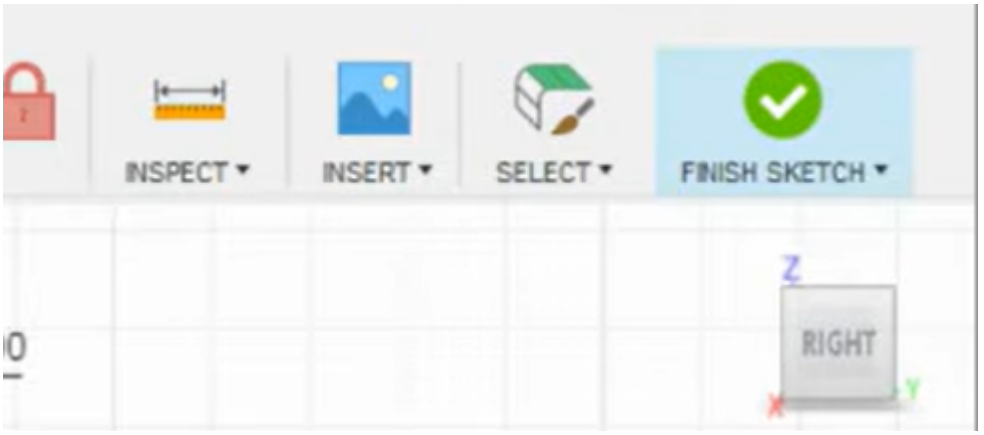

11. By using trim options we can trim the unwanted things so we can make the project as the project given in the figure.

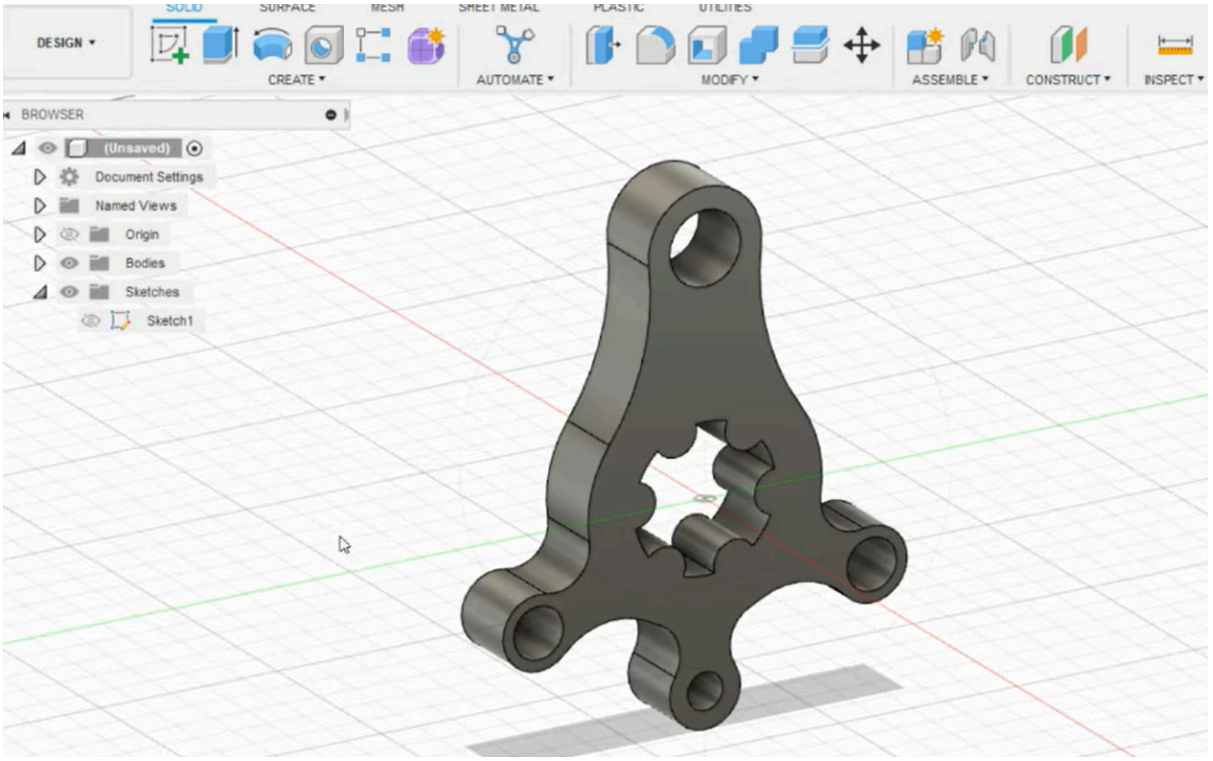

12. Now finally we can use the mirror option for mirroring the object so the final result as the output we can create.

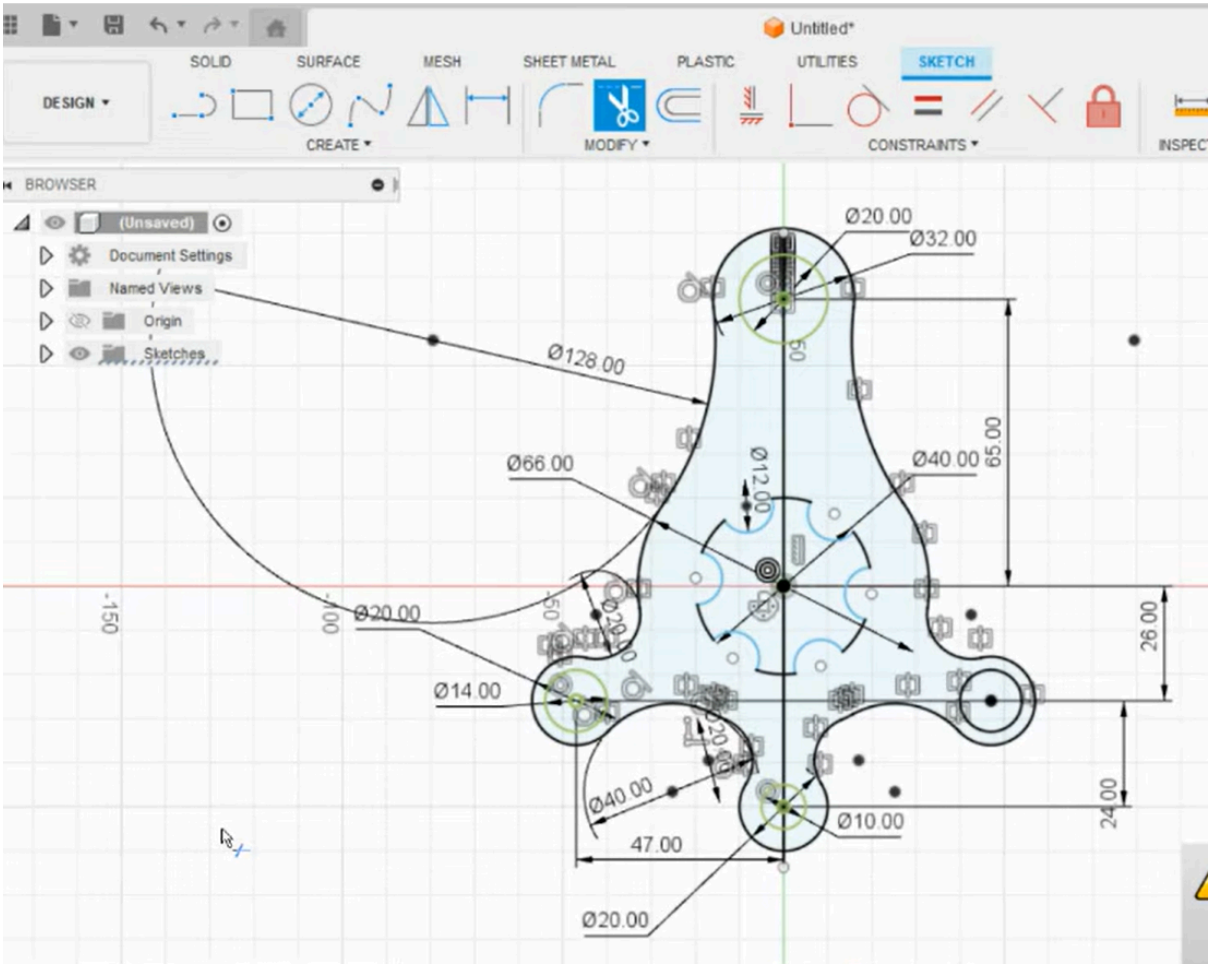

13.Thus the project is formed by these much of steps and finally give the finish sketch option to finish the project.

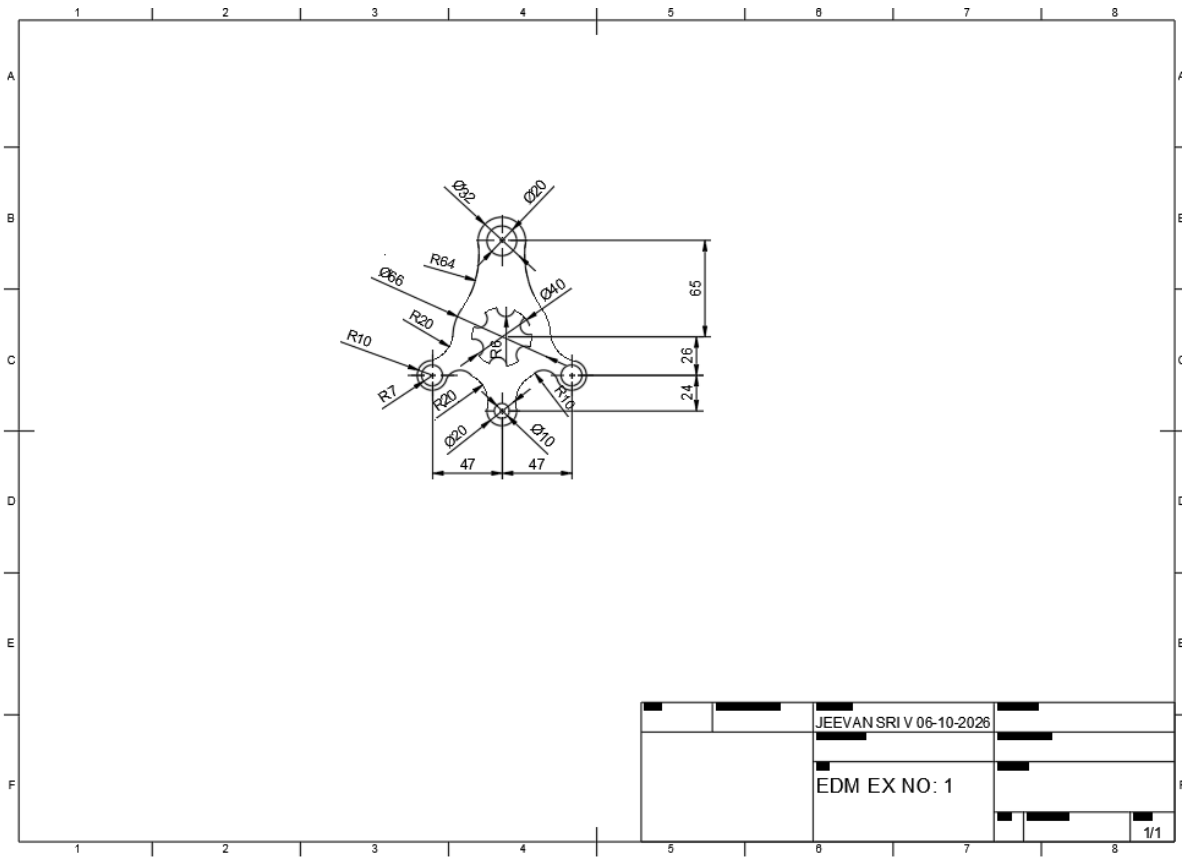

14. So finally we finish our project by extrude it on 15mm.

OUTPUT:

RESULT:

Thus the given sketch is drawn and drafted using fusion 360 tool.
